

Appendix A. Summary of projects providing project effectiveness data.

1. California Polytechnic State University's Little Creek Study is evaluating the suspended sediment loads and hydrologic responses to timber harvest.
2. The California Department of Forestry is developing a new "Interagency Mitigation Monitoring Program" which will build on the Hillslope Monitoring Program to evaluate timber harvest practices.
3. The Santa Cruz County Resource Conservation District is implementing the Cost-Share Implementation of Erosion and Sediment Control Best Management Practices for Private Roads in the San Lorenzo River Watershed program. This project is funded by a 319(h) CWA grant.
4. Ecology Action of Santa Cruz is implementing the Proposition 13 Manure and Erosion Pollution Prevention from Livestock Grant. The grant provides education and assistance to livestock owners and operators to reduce off site mobilization of non-point source pollutants, including sediment, from livestock facilities.
